(54) Title: **SYSTEM AND METHOD FOR POWER CONSUMPTION MANAGEMENT**

(57) **Abstract:** A battery-driven electronic device, e.g. a radio communication terminal, which is operable in different modes with related power consumption, comprising data presentation means, wherein said device comprises power consumption detecting means for establishing current power consumption during operation of the device, and means for presenting data dependent on established current power consumption through said data presentation means. By detecting and presenting data pertaining to the current power consumption situation, rather than to a predetermined expected way of use, such as talk mode or standby mode, better control is given to a user of the device to handle it in an optimised way, preferably with a longer battery time.
